RE: City of Miami Transition to an Automated Front Load Trash Collection System for All Commercial Containers

Dear Commercial Customer,

This letter is to inform you that the City of Miami Solid Waste Department is beginning to transition to an automated front load trash collection system for all Commercial containers. All metal (2) yard dumpsters will be required to have side pockets compatible with both front load, and rear load dumping systems by July 1, 2018. All currently, existing (2) yard dumpsters can be retrofitted with metal side pockets measuring 11" x 11" x 24" and will be at the expense of the commercial customer.

Pictured below is an example of required pockets. Local vendors have been contacted and are able to complete the retrofitting by the July 1, 2018 date if requested.

If you have any questions regarding these changes, please feel free to contact the Solid Waste Department at: 918-541-2285.

Thank you for your help on this important public matter,

City of Miami
