

THE
PERFORMETER®

A Financial Statement Analysis of
The City of Miami, Oklahoma
As of and for the year ended June 30, 2016

Crawford & Associates, P.C.

What is a Performer[®]?

An analysis that takes governmental financial statements and converts them into useful and understandable measures of financial performance

Financial ratios and a copyrighted analysis methodology are used to arrive at an overall rating of 1-10

The overall reading is a barometer of the City's financial health and performance

How to Use the Performer[®]

Use the individual ratios to identify financial warning signs – the ratios are combined into three categories

Financial position ratios – that measure financial health at year end

Financial performance ratios - that measure changes in financial position from the prior year

Financial capability ratios - that measure the ability to raise revenue or issue debt in the future, if needed

Use the overall rating as a collective benchmark of financial health and success of the City as a whole

Use the comparisons to prior years to monitor trends in financial indicators

Limitations of the Performer[®]

The Performer[®] should not be used as the only source of financial information to evaluate financial health and performance

The analysis is an overall rating of the City as a whole and not of specific activities, funds or units

The Performer[®] is based on Crawford & Associates' professional judgment and is limited as to its intended use

Performer[®] Reading

Overall Reading

For the 2016 fiscal year, the readings by ratio category were as follows:

Financial Position	6.2
Financial Performance	8.6
Financial Capability	8.4

The strongest components of the ratings were the City's financial performance and financial capability over the past year. The City's financial position at June 30, 2016 also reflects an above satisfactory rating. The 2016 overall reading of 7.7 indicates the evaluator's opinion that Miami's overall financial health remains well above satisfactory, and remains relatively consistent with the eight prior years presented.

Performer[®] Ratios

Financial Position Ratios

Unrestricted Net Position	How do our total rainy day funds look?
General Fund Unassigned Fund Balance	How does our General Fund unassigned fund balance carryover position look?
Capital Asset Condition	How much life do we still have left in our capital assets?
Non-Uniformed Employee Pension Plan Funding	Will our non-uniform employees be happy with us when they retire?
Assets to Debt	Who really owns the City?
Current Ratio	Will our employees and vendors be pleased with our ability to pay them on time?
Quick Ratio	How is our short-term cash position?

Level of Unrestricted Net Position

How do our total rainy day funds look?

Unrestricted Net Position as a Percentage of Annual Revenues

The level of total unrestricted net position is an indication of the amount of unexpended and available resources the City has in all funds combined at a point in time to fund emergencies, shortfalls or other unexpected needs. In our model, 50% is considered excellent, while 30% is considered a desired minimum.

For the year ended June 30, 2016, the City's total unrestricted net position approximated \$6.8 million or 21% of annual total revenues. The current year saw an increase in the ratio from the previous period, but this ratio continues to be below satisfactory in our model. Approximately \$6.3 million of this \$6.8 million is designated as "rainy day" funds in the Special Utility Authority (SUA).

2008	2009	2010	2011	2012	2013	2014	2015	2016
35%	41%	38%	-8%	-2%	33%	34%	15%	21%

Level of General Fund Unassigned Fund Balance

How does our General Fund unassigned fund balance carryover position look?

General Fund Unassigned Fund Balance as a Percentage of Annual Revenues

The level of unassigned fund balance is an indication of the amount of unexpended, unencumbered and available resources the City has at a point in time to carryover into the next fiscal year to fund budgetary emergencies, shortfalls or other unexpected needs. In our model, 10% is considered a minimum responsible level, while 30% is considered desirable.

For the year ended June 30, 2016, the City's unassigned fund balance of the General Fund amounted to \$1.3 million or 17% of annual General Fund revenues. This is a decrease from the ratio of the last period, however it is considered above satisfactory.

2008	2009	2010	2011	2012	2013	2014	2015	2016
15%	12%	7%	13%	19%	18%	7%	22%	17%

Capital Asset Condition

How much useful life do we have left in our capital assets?

Percentage of Capital Assets' Useful Life Remaining

The capital asset condition ratio compares depreciable capital assets cost to accumulated depreciation to determine the overall percentage of useful life remaining. A low percentage could indicate an upcoming need to replace a significant amount of capital assets.

At June 30, 2016, the City's depreciable capital assets amounted to \$127 million while accumulated depreciation totaled \$89 million. This indicates that, on average, the City's capital assets have less than one-third (30%) of their useful lives remaining. This is a below satisfactory financial indicator in our model and indicates the City is not yet replacing capital assets by the end of their normal useful lives.

2008	2009	2010	2011	2012	2013	2014	2015	2016
41%	36%	34%	33%	33%	30%	30%	28%	30%

Non-Uniformed Employee Pension Plan Funding Ratio

Will we be able to pay our employees when they retire?

Pension Plan Assets as a Percentage of Accrued Liability

The pension funding ratio compares the fair value of the OkMRF pension plan's net position to the total pension liability for pension benefits. A percentage less than 100% indicates the plan is underfunded at the valuation date.

At June 30, 2016, the City's pension plan assets were 67% of the total pension liability, indicating the plan was approximately two-thirds funded from an actuarial accounting perspective at the last valuation date. Although consistent with the prior year, this remains an unfavorable ratio.

2008	2009	2010	2011	2012	2013	2014	2015	2016
73%	71%	71%	68%	67%	67%	62%	69%	67%

Assets to Debt

Who really owns the City?

Percentage of Debt in Assets

The assets to debt ratio measures the extent to which the City had funded its assets with debt. The higher the percentage, the more equity the City has in its assets.

At June 30, 2016, a little below one half (47%) of the City's \$70 million of total assets were funded with debt or other obligations. This is considered an above satisfactory financial indicator and indicates that for each dollar of City assets owned, it owes 47 cents of that dollar to others, leaving a 53% equity in such assets. This ratio remains consistent with the ratio of the prior year, but represents a trend of higher debts when compared to assets over the last several years.

2008	2009	2010	2011	2012	2013	2014	2015	2016
32%	26%	27%	40%	41%	40%	39%	46%	47%

Current Ratio

Will our employees and vendors be pleased with our ability to pay them on time?

Current Assets Compared to Current Liabilities

The current ratio is one measure of the City's ability to pay its short-term obligations. The current ratio compares total current assets and liabilities. A current ratio of 2.00 to 1 indicates a satisfactory current liquidity and an ability to meet the short-term obligations.

At June 30, 2016 the City had a government-wide ratio of current assets to current liabilities of 3.84 to 1. This indicates that the City had nearly four times the amount of current assets needed to pay current liabilities. This is considered an excellent indicator of liquidity, although a decrease when compared to the ratio of the prior year.

2008	2009	2010	2011	2012	2013	2014	2015	2016
3.54	3.94	3.87	3.83	3.56	3.65	3.27	4.30	3.84

Quick Ratio

How is our short-term cash position?

Cash and Cash Equivalents Compared to Current Operating Liabilities

The quick ratio is another, more conservative, measure of the City's ability to pay its short-term operating obligations. The quick ratio compares total cash and short-term investments to current liabilities. A quick ratio of 1.00 to 1 indicates adequate current liquidity and an ability to meet the short-term obligations with cash.

At June 30, 2016, the City had a government-wide ratio of cash and cash equivalents to current operating liabilities of 2.21 to 1. This indicates that the City had nearly two and one-quarter times the minimum amount of cash and cash equivalents needed to pay short-term operating obligations at year end. This is considered a favorable ratio in our model although it does represent a slight decrease from the ratio of the prior year.

Performer[®] Ratios

Financial Performance Ratios

Change in Net Position	Did our overall financial condition improve, decline, or remain steady from the past year?
Interperiod Equity	Who paid for the costs of current year services – current, past, or future tax and rate payers?
BTA Self-Sufficiency	Did current year business-type activities, such as utilities, pay for themselves?
Debt Service Coverage	Were our revenue bond investors pleased with our ability to pay them on time?
Sales Tax Growth	What is the state of our local economy?

Change in Net Position

Did our overall financial condition improve, decline or remain steady from the past year?

Change in Net Position

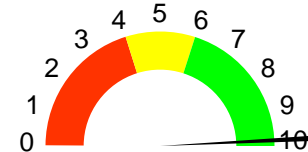

Net position include all assets and deferred outflows, and all liabilities and deferred inflows of the City, except for fiduciary funds held for the benefit of others. It is measured as the difference between total assets and deferred outflows, including capital assets, and total liabilities and deferred inflows, including long-term debt. Net position increases as a result of earning more revenue than expenses incurred in the fiscal year.

For the year ended June 30, 2016, total net position increased by \$2.1 million, or 5.8% from the prior year. Governmental activities net position increased by \$796,908, while business-type activities net position increased by \$1,314,826.

2008	2009	2010	2011	2012	2013	2014	2015	2016
+3.2%	-2.5%	-0.7%	+1.9%	-0.3%	-5.7%	+5.4%	+6.3%*	+5.8%

* Restated for pension accounting standards changes

Interperiod Equity

Who paid for the costs of current year services – current, past or future tax and rate payers?

Current Year Revenues as a Percentage of Current Year Costs

Interperiod equity is achieved when the cost of current services are paid by current year tax and rate payers. When current year costs are subsidized by prior year resources carried over or from debt proceeds, it can be said that interperiod equity was not achieved, and either past or future tax and rate payers helped fund the costs of current year services.

For the year ended June 30, 2016, the City's total costs were fully funded by current year tax and rate payers, with current year revenues, excluding fund balance carryovers, generating a level of 107% of current year costs. This ratio is relatively consistent with the ratios of the prior two years.

2008	2009	2010	2011	2012	2013	2014	2015	2016
104%	96%	99%	103%	100%	93%	107%	106%	107%

BTA Self-Sufficiency

_____ Did current year business-type activities, such as utilities, pay for themselves?

Percentage of BTA Expenses Covered
By BTA Revenues

The self-sufficiency ratio indicates the level at which business-type activities (utilities) covered their current costs with current year revenues, without having to rely on subsidies or use of prior year reserves.

For the year ended June 30, 2016, the City's business-type activities were 126% self-sufficient in total. This indicates that all of the current year costs were funded by current year revenues in addition to generating some additional resources. This is a slight increase from the ratio calculated in the prior year.

2008	2009	2010	2011	2012	2013	2014	2015	2016
98%	104%	113%	111%	113%	115%	118%	123%	126%

Debt Service Coverage

Were our revenue bond investors pleased with our ability to pay them on time?

Number of Times Net Pledged Revenues Cover Annual Debt Service

The debt service coverage ratio compares the City's debt service requirements on revenue bonds to the net operating cash generated by the revenue streams pledged for payment. A debt service ratio of greater than 1.00 indicates a sufficient ability to make the debt service payments from net revenue from operations.

For the year ended June 30, 2016, the City experienced a favorable debt service coverage ratio of 5.48, an increase from the ratio in the prior year. This indicates the City generated nearly 5 and one-half times the amount of cash necessary to pay the debt service requirements on its revenue bonds and notes.

2008	2009	2010	2011	2012	2013	2014	2015	2016
1.91	3.21	5.81	3.66	3.71	4.80	4.96	5.43	5.48

Sales Tax Growth

What is the state of our local economy?

Sales Revenue
per One-Cent Tax

Due to the inability of Oklahoma municipalities to levy a property tax for operations, the City is highly dependent on sales tax revenue to fund its general governmental activities.

Sales tax growth is a measure of the state of our local economy by comparing revenue collected to the prior year in terms of the change per one-cent tax.

For the year ended June 30, 2016, the City experienced an increase in sales tax collections per one-cent in the amount of \$7,632 or .4% from the prior year. The Sales Tax Rate of 3.65% was in effect for the entire year.

2008	2009	2010	2011	2012	2013	2014	2015	2016

Performer[®] Ratios

Financial Capability Ratios

Revenue Dispersion	How much of our revenue is beyond our direct control?
Debt Service Load	How heavily is our budget loaded with payments to retire long-term debt?
Bonded Debt Per Capita	What is the debt burden on our property tax payers?
Legal Debt Limit Remaining	Will we be legally able to issue more long-term debt if needed?
Property Taxes Per Capita	Will our citizens be willing to approve property tax increases if needed?
Local Sales Tax Rate	Will our citizens be willing to approve sales tax increases if needed?

Revenue Dispersion

How heavily are we relying on revenue sources beyond our direct control?

2016 Revenue Percentages by Source

The percentage dispersion of revenue by source indicates how dependent the City is on certain types of revenue. The more dependent the City is on revenue sources beyond its direct control, such as taxes requiring voter approval or revenues from other governments such as grants, the less favorable the dispersion.

For the year ended June 30, 2016, the City had direct control over 73% (service charges) of its revenues. This ratio indicates the City has limited exposure, as do most cities, to financial difficulties due to reliance (27%) on taxes that require voter approval and on grants, contributions and other revenue.

2008	2009	2010	2011	2012	2013	2014	2015	2016
63%	71%	73%	72%	74%	76%	72%	73%	73%

Debt Service Load

How much of our annual budget is loaded with disbursements to pay off long-term debt?

Percentage of Debt Service and Non-Debt Expenditures

The debt service load ratio measures the extent to which the City's non-capital expenditures City-wide were comprised of debt service payments on long-term debt.

For the year ended June 30, 2016, the City's total non-capital expenditures amounted to \$32 million of which \$2.7 million (or 8%) were payments for principal and interest on long-term debt. In our model, this is a near excellent financial indicator and indicates that for every dollar the City spent on non-capital items, only 8 cents of that dollar was used for debt service.

2008	2009	2010	2011	2012	2013	2014	2015	2016
5%	6%	6%	7%	9%	9%	8%	8%	8%

Bonded Debt Per Capita

What is the debt burden on our property tax payers?

General Bonded Debt Per Capita

The financial ratio of general bonded debt per capita is an indication of the City's debt burden on its citizens and other taxpayers related to general obligation debt payable from property taxes. The ratio does not consider debt payable from enterprise activities or alternate revenues.

For the year ended June 30, 2016, the City continued to have no general obligation bonded debt outstanding. Therefore, it has no general bonded debt burden on its citizens and taxpayers.

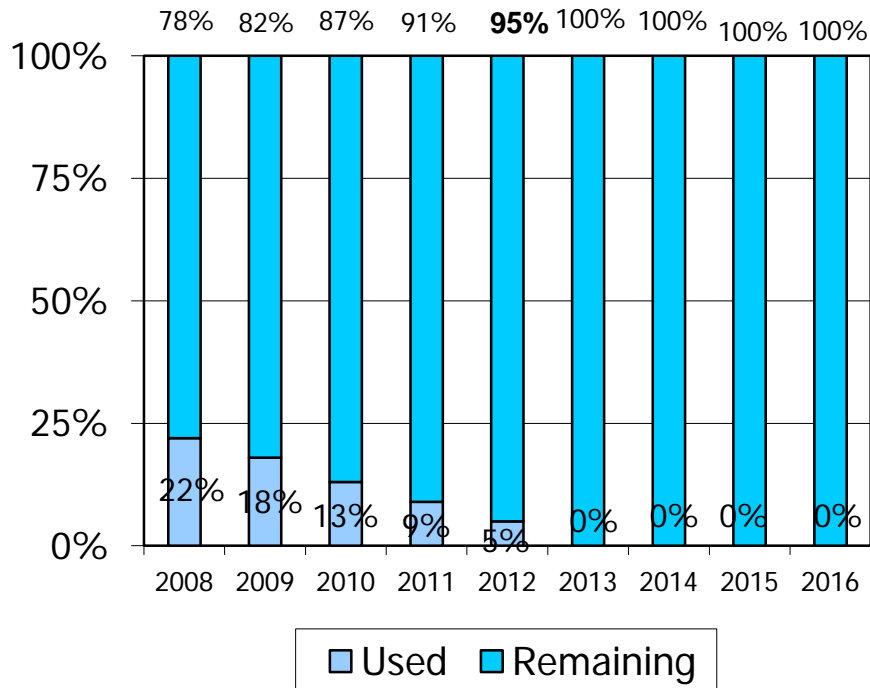

2008	2009	2010	2011	2012	2013	2014	2015	2016
\$81	\$66	\$50	\$34	\$18	\$0	\$0	\$0	\$0

Legal Debt Limit Remaining

Will we be legally able to issue more long-term debt, if needed?

Percentage of Legal Debt Limit Used Versus Remaining

Oklahoma law limits certain types of general obligation debt to no more than 10% of the City's net assessed valuation of taxable property.

For the year ended June 30, 2016, the City continued to have no general obligation debt applicable to this legal debt limit. This means that at June 30, 2016, the City had 100% of its general bonded debt legal limit remaining.

2008	2009	2010	2011	2012	2013	2014	2015	2016
78%	82%	87%	91%	95%	100%	100%	100%	100%

Property Taxes Per Capita

Will our citizens be willing to approve property tax increases, if needed?

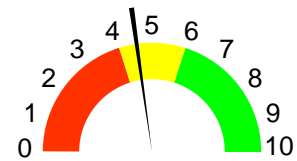

Total Property Taxes Per Capita

The financial ratio of property taxes per capita is an indication of the City's property tax burden on its citizens and other taxpayers. Constitutionally, Oklahoma municipalities may only levy a property tax to retire general obligation bonded debt and judgments.

For the year ended June 30, 2016, the City had no general obligation bond debt service or judgments outstanding, and therefore, had no property tax levied in 2016. This is an excellent indicator in our model.

2008	2009	2010	2011	2012	2013	2014	2015	2016
\$19	\$18	\$17	\$16	\$17	\$0	\$0	0\$	0\$

Local Sales Tax Rate

Will our citizens be willing to approve sales tax increases, if needed?

Sales Tax Rate

For Oklahoma municipalities, sales tax is the primary source of funding for general government operations. Sales tax rates cannot be increased without voter approval. In our model, a 2% tax rate is considered excellent from the financing margin perspective, while 5% rate is considered a high rate and therefore weak in terms of increase ability margin.

For the year ended June 30, 2016, the City's sales tax rate in effect was 3.65%.

	2008	2009	2010	2011	2012	2013	2014	2015	2016
Rate	3.00%	3.00%	3.00%	3.65%	3.65%	3.65%	3.65%	3.65%	3.65%
